

Set up

Begin a new repo by doing:

```
git init
```

Configure your identity for this repo:

```
git config --local user.name "John Doe"
```

```
git config --local user.email johndoe@mail.co
```

Add the remote:

```
git remote add <shortname> <url>
```

Push stuff to it:

```
git push --set-upstream <shortname> <branch>
```

Done!
